

The Grease / Solids Trap - Under Sink units are suitable for small marine and inland vessels where the available area does not allow installation of a grey water storage tank, i.e. Mono Hull boats and Trailer Sailors with a small galley kitchen etc.

Some States require these vessels to have a Grease / Solids Trap installed on the kitchen waste, prior to returning waste water to the river.

Two different sized units are available, 4.5 Ltr and 1.75 Ltr capacity and are designed to be located under the sink or where practical, and can be manufactured with the inlet and outlet on either the left or right hand side.

The units have two functions:-

1. A Solid Strainer Bucket to catch solid waste, and
2. A Grease Trap to retain the grease and fats.

They are designed for easy removal when cleaning and the transparent face indicates the levels of grease accumulation.

QUALITY APPROVED TO AS/NZS ISO 9001:2008
REGN. Number 1274

Manufactured under a quality system certified as complying with ISO 9001 by an accredited certification body
